                                                                                                                                             Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to novel retrotransposons from the yeast Candida albicans which have a copy number of 40-150, preferably 50-100 copies per genome. In particular, the invention relates to the novel C. albicans Tyl/Copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. albicans retrotransposons 1-28. pCal was initially isolated from C. albicans retrotransposons 1-28. pCal was initially isolated from C. albicans hOG1042 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (LTRs) and two open reading frames (ORFs). The first ORF encodes a gag (group antigen) protein, and the second ORF encodes a polyprotein (pol) consisting of an aspartate protease, integrase, reverse transcriptase (RT) and RMaseH. The gag and pol ORFs of pCal are in the same reading frame, separated only by
                                                                                                                                                                                                                                                                                    for the delivery and expression of a therapeutic, immunological or immunospenic molecule (e.g., an antigen) and may also be used for eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate transgenic animals, to detect the presence of Candida in a sample, to detect and disrupt genes, and to assign functions to nucleotide sequences. The present sequence represents the C. albicans pCal
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. T aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. T gas and pol ORFs of pCal are in the same reading frame, separated only a termination codon (TGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is mediated by the formation of a pseudoknot within the gag-pol mRNA. The retrotransposons of the invention can be used as vectors for in vitor or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 12; Fig 2B; 204pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Qy
                                                                                                                                                                                                                                                                                     QΥ
                                                                                                                                                                                                                                                                                                                                   Дb
                                                                                                                                                                                                                                                                                                                                                                          Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CC albicans Tyl/Copia retrotransposon, designated TCa2, and to the integrated CC form of this retrotransposon, designated TCa2, and to the integrated CC albicans retrotransposons 1-28. pCal was initially isolated from C. CC albicans hod1042 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (LTRs) and two open CC reading frames (ORFs). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pol) consisting of an esparate protease, integrase, reverse transcriptase (RT) and RNaseH. The CC gag and pol ORFs of pCal are in the same reading frame, separated only by a termination codon (TCA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is the occasional readthrough suppression of the stop codon, which is the retrotransposons of the invention can be used as vectors for in vitro or in vivo transformation and expression. They can thus be used for immunogenic molecule (e.g., an antigen) and may also be used for celiciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate transgenic animals, to detect the presence of Candida in a sample, to detect and disrupt genes, and to assign functions to nucleotide considered sequences. Sequences AAA57923-A57936 represents TCa2 retrotransposon 5' cregions from a variety of C. albicans strains.

In particular, the invention relates to the novel C.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel retrotransposon expression vectors useful for expressing an antigen, epitope or therapeutic agent, or detecting genes or the presence of Candida in a sample \cdot
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                01-NOV-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       QУ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           AAA57923
                                                                                                                                                                The invention relates to novel retrotransposons from the yeast Candida CC albicans which have a copy number of 40-150, preferably 50-100 copies CC per genome. In particular, the invention relates to the novel C. CC albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. CC albicans retrotransposons 1-28. pCal was initially isolated from C. CC albicans hOG1042 and has a copy number of 50-100 copies per cell. It CC comprises identical 280 bp long terminal repeats (LTRs) and two open CC reading frames (ORFs). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pol) consisting of an CC aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The CC gag and pol ORFs of pCal are in the same reading frame, separated only by CC a termination codon (TGA). Translation of the stop codon, which is CC mediated by the formation of a pseudoknot within the gag-pol mRNA.

CC mediated by the formation of a pseudoknot within the gag-pol mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Retrotransposon; pCal; TCa2; Ty1; copia; long terminal repeat; LTR; gag gene; group antigen; polyprotein; pol; asparate protease; integreverse transcriptase; RNaseH; pseudoknot; readthrough translation; stop codon suppression; gene delivery; gene therapy vector;

CC form of this retrotransposon, designated TGA2, and to the novel C.
CC albicans retrotransposons 1-28. pCal was initially isolated from C.
CC albicans hGG1042 and has a copy number of 50-100 copies per cell. It
CC comprises identical 280 bp long terminal repeats (LTRS) and two open
CC reading frames (ORFs). The first ORF encodes a gag (group antigen)
CC protein, and the second ORF encodes a polyprotein (pol) consisting of an
CC aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The
CC gag and pol ORFs of pCal are in the same reading frame, separated only by
CC the occasional readthrough suppression of the pol ORF occurs through
CC the occasional readthrough suppression of the gag-pol mRNA.
CC The retrotransposons of the invention can be used as vectors for in
CC vitro or in vivo transformation and expression. They can thus be used
CC for the delivery and expression of a therapeutic, immunological or
CC eliciting an immunological response in a host organism. They are
CC undesirable. Additionally, the retrotransposons may be used to generate
CC transgenic animals, to detect the presence of Candida in a sample, to
CC sequences. Sequences AAA57923-A57936 represents TCa2 retrotransposon 5'
CC regions from a variety of C. albicans strains.

                                                                                                                                                                                                                                                                                                                                                                       gag and por conca termination codon
                                                                                                                                                                                                                 for the delivery and expression of a therapeutic, immunological or immunopenic molecule (e.g., an antigen) and may also be used for eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or
                                                                                                                                                                                                                                                                                                          aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. T gag and pol ORFs of pcal are in the same reading frame, separated only a termination codon (TGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is mediated by the formation of a pseudoknot within the gag-pol mRNA. The retrotransposons of the invention can be used as vectors for in vitro or in vivo transformation and expression. They can thus be used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The invention relates to novel retrotransposons from the yeast Candida albicans which have a copy number of 40-150, preferably 50-100 copies per genome. In particular, the invention relates to the novel C. albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. albicans retrotransposons 1-28, pCal was initially isolated from C. albicans h0G1042 and has a copy number of 50-100 copies per cell. It
                                                                                                                                          undesirable. Additionally, the retrotransposons may be used to generate transgenic animals, to detect the presence of Candida in a sample, to detect and disrupt genes, and to assign functions to nucleotide sequences. Sequences AAA57923-A57936 represents TCa2 retrotransposon 5'
                                                                                                                                                                                                                                                                                                                                                                                                                                        albicans hog1042 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (LTRs) and two open reading frames (ORFs). The first ORF encodes a gag (group antigen) protein, and the second ORF encodes a polyprotein (pol) consisting of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Example 9; Fig 9;

The invention relates to novel retrotransposons from the yeast Candida albicans which have a copy number of 40-150, preferably 50-100 copies per genome. In particular, the invention relates to the novel C. albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. albicans retrotransposons 1-28. pCal was initially isolated from C.

It CC comprises identical 280 bp long terminal repeats (LTRs) and two open creading frames (ORFs). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pol) consisting of an expartate protease, integrase, reverse transcriptase (RT) and RNaseH. The CC gag and pol ORFs of pCal are in the same reading frame, separated only by CC a termination codon (TGA). Translation of the pol ORF occurs through CC mediated by the formation of a pseudoknot within the gag-pol mRNA. CC The retrotransposons of the invention can be used as vectors for in CC vitro or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or CC immunogenic molecule (e.g., an antigen) and may also be used for CC eliciting an immunological response in a host organism. They are CC therefore useful in genetic vaccine compositions and for gene therapy, CC undesirable. Additionally, the retrotransposons may be used to generate CC transgenic animals, to detect the presence of Candida in a sample, to Generate and disrupt genes, and to assign functions to nucleotide corregions from a variety of C. albicans strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

                                              QΥ
                                                                                                                                                                                                         The invention relates to novel retrotransposons from the yeast Candida Calbicans which have a copy number of 40-150, preferably 50-100 copies CC per genome. In particular, the invention relates to the novel C. CC albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated Cform of this retrotransposon, designated TCa2, and to the novel C. CC albicans retrotransposons 1-80. pCal was initially isolated from C. CC albicans hodil42 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (LTRs) and two open C. Creading frames (ORFs). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pol) consisting of an appartate protease, integrase, reverse transcriptase (RT) and RNaseH. The gag and pol ORFs of pCal are in the same reading frame, separated only by a termination codon (TGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is certain the same reading frame separated only by the occasional readthrough suppression of the stop codon, which is certain the delivery and expression of the stop codon, which is certain the delivery and expression of the stop codon, which is certain the delivery and expression of a therapeutic, immunological or immunogenic molecule (e.g., an antigen) and may also be used for celiciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retroviral vectors is unsafe to generate transgenic animals, to detect the presence of Candida in a sample, to generate candidations to nucleotide.

Cc sequences. Sequences AAA57936 represents TCa2 retrotransposon 5' and in a variety of C albican strains.

                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to novel retrotransposons from the yeast Candida albicans which have a copy number of 40-150, preferably 50-100 copies per genome. In particular, the invention relates to the novel C. albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated Tca2, and to the novel C. albicans retrotransposons 1-28, pCal was initially isolated from C. albicans hGG1042 and has a copy number of 50-100 copies per cell. It
                                                                                                                                                            comprises identical 280 bp long terminal repeats (LTRs) and two open reading frames (ORFs). The first ORF encodes a gag (group antigen) protein, and the second ORF encodes a polyprotein (pol) consisting of an aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The gag and pol ORFs of pCal are in the same reading frame, separated only by a termination codon (TGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is
                               mediated by the formation of a pseudoknot within the gag-pol mRNA. The retrotransposons of the invention can be used as vectors for in vito transformation and expression. Set as vectors thus be used for the delivery and expression of a therapeutic, immunological or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Novel retrotransposon expression vectors useful for

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         detect and disrupt genes, and to assign functions to nucleotide sequences. Sequences AAA57923-A57936 represents {\tt TCa2} retrotransposon regions from a variety of C. albicans strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate transgenic animals, to detect the presence of Candida in a sample, to

aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The care and pol ORFs of pCal are in the same reading frame, separated only by a termination codon (TGA). Translation of the pol ORFs occurs through the occasional readthrough suppression of the stop codon, which is mediated by the formation of a pseudoknot within the gag-pol mRNA. The retrotransposons of the invention can be used as vectors for in convitro or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or immunogenic molecule (e.g., an antigen) and may also be used for immunogenic molecule (e.g., an antigen) and may also be used for therefore useful in genetic vaccine compositions and for gene therapy, therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate thransgenic animals, to detect the presence of candida in a sample, to detect and disrupt genes, and to assign functions to nucleotide compositions from a variety of C. albicans strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to novel retrotransposons from the yeast Candida albicans which have a copy number of 40-150, preferably 50-100 copies per genome. In particular, the invention relates to the novel C. albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. albicans retrotransposons 1-28. pCal was initially isolated from C. albicans hOG1042 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (ITMS) and two open reading frames (ORFs). The first ORF encodes a gag (group antigen) protein, and the second ORF encodes a polyprotein (pD1) consisting of an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel retrotransposon expression vectors useful for expressing an antigen, epitope or therapeutic agent, or detecting genes or the presence of Candida in a sample - \,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Example 9; Fig 9; 204pp;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          2000-365640/31.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              De Backer MD,

```

The invention relates to novel retrotransposons from the yeast Candida CC albicans which have a copy number of 40-150, preferably 50-100 copies CC per genome. In particular, the invention relates to the novel C. CC albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated Cform of this retrotransposon, designated TCa2, and to the novel C. CC albicans hOG1042 and has a copy number of 50-100 copies per cell. It CC comprises identical 280 bp long terminal repeats (LTPs) and two open CC reading frames (ORFs). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pol) consisting of an CC aspartate protease, integrase, reverse transcriptase (RT) and RMSASH. The GC gag and pol ORFs of pCal are in the same reading frame, separated only by a termination codon (TGA). Translation of the pol ORF occurs through CC the occasional readthrough suppression of the stop codon, which is CC mediated by the formation and expression. They can thus be used CC vitto or in vivo transformation and expression. They can thus be used for immunogenic molecule (e.g., an antigen) and may also be used for CC eliciting an immunological response in a host organism. They are CC undesirable. Additionally, the retrotransposons may be used to generate CC undesirable. Additionally, the retrotransposons may be used to generate transgenic animals, to detect the presence of Candida in a sample, to detect and disrupt genes, and to assign functions to nucleotide sequences. Sequences AAA57923-A57936 represents TCa2 retrotransposon regions from a variety of C. albicans strains.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   aspartate protease, integrase, reverse transcriptage (RT) and RNaseH. The gag and pol ORFs of pCal are in the same reading frame, separated only keep a termination codon (TGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is mediated by the formation of a pseudoknot within the gag-pol mRNA. The retrotransposons of the invention can be used as vectors for in vitro or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or immunogenic molecule (e.g., an antigen) and may also be used for eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retroviral vectors is used to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                per genome. In particular, the invention relates to the novel C. albicans Tyl/Copia retrotransposon pcal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. albicans retrotransposons 1-28. pCa1 was initially isolated from C. albicans h0G1042 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (LTRs) and two open reading frames (ORFs). The first ORF encodes a gag (group antigen) protein, and the second ORF encodes a polyprotein (pc) consisting of an protein, and the second ORF encodes a polyprotein (pc) and two second or protein (pc) and polyprotein (pc) an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      transgenic animals, to detect the presence of Candida in a sample, to detect and disrupt genes, and to assign functions to nucleotide sequences. Sequences AAA57923-A57936 represents TCa2 retrotransposon 5' regions from a variety of C. albicans strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Sequence 392 BP; 135 A; 58 C; 72 G; 127 T; 0 other;

CC form of this retrotransposon, designated TGA, and to the novel C. C. albicans retrotransposons 1-28. pCal was initially isolated from C. C. albicans hog1042 and has a copy number of 50-100 copies per cell. It C. comprises identical 280 bp long terminal repeats (LTRs) and two open C. C. reading frames (ORFs). The first ORF encodes a gag (group antigen) C. C. protein, and the second ORF encodes a polyprotein (pol) consisting of an C. aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The G. C. gag and pol ORFs of pCal are in the same reading frame, separated only by the cocasional readthrough suppression of the stop codon, which is C. C. The retrotransposons of the invention can be used as vectors for in C. C. The retrotransposons of the invention can be used as vectors for in C. C. The delivery and expression of a therapeutic, immunological or immunological response in a host organism. They are considered in genetic vaccine compositions and for gene therapy, C. C. c. c. and disrupt genes, and to assign functions to nucleotide transgenic animals, to detect the presence of Candida in a sample, to C. G. c. albicans strains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Matches

In particular, the invention relates to the novel C. albicans Tyloopia retrotransposon poal (AAA57920), and to the integrated for the contraction of the integrated and the contraction of the contraction
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel retrotransposon expression vectors useful for expressing an antigen, epitope or therapeutic agent, or detecting genes or the presence of Candida in a sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     WPI; 2000-365640/31.

CC The invention relates to novel retrotransposons from the yeast Candida CC albicans which have a copy number of 40-150, preferably 50-100 copies CC per genome. In particular, the invention relates to the novel C. CC albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated CC, form of this retrotransposon, designated TCa2, and to the novel C. CC albicans retrotransposons 1-28. pCal was initially isolated from C. CC calbicans hOG1042 and has a copy number of 50-100 copies per cell. It CC comprises identical 280 bp long terminal repeats (LTRs) and two open CC reading frames (OREs). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pDl) consisting of an CC aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The CC gag and pol ORFs of pCal are in the same reading frame, separated only by CC a termination codon (TGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is compared to the formation of a pseudoknot within the gag-pol mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Вb

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The retrotransposons of the invention can be used as vectors for in vitro or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or immunological or immunological or an antigen) and may also be used for eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate transgenic animals, to detect the presence of Candida in a Sample, to detect and disrupt genes, and to assign functions to nucleotide sequences. Sequences AAA57923-A57936 represents TCa2 retrotransposon 5' regions from a variety of C. albicans strains.

Thy gag and pol ORFs of pCal are in the same reading frame, separated only k a termination codon (YGA). Translation of the pol ORF occurs through the occasional readthrough suppression of the stop codon, which is mediated by the formation of a pseudoknot within the gag-pol mRNA. The retrotransposons of the invention can be used as vectors for in vitro or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or immunogenic molecule (e.g., an antigen) and may also be used for eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate transgrand animals to Advant the procession of a contract transgrand animals to Advant the procession of a contract transgrand animals to Advant the procession of a contract transgrand animals to Advant the procession of a contract transgrand animals to Advant the procession of the stop transgrand animals to Advant the procession of the stop transgrand animals to Advant the procession of the stop the procession of the stop transgrand animals to Advant the procession of the stop transgrand to generate transgrand animals to Advant the procession of the procession of the stop transgrand to generate transgrand animals to Advant the procession of the stop transgrand to generate transgrand animals to Advant the procession of the stop transgrand to generate transgrand animals to Advant the procession of the stop transgrand to generate transgrand animals to Advant the procession of the stop transgrand to generate transgrand transgrand transgrand transgrand transgran
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel retrotransposons from the yeast Candida albicans which have a copy number of 40-150, preferably 50-100 copies per genome. In particular, the invention relates to the novel C. albicans Tyl/Copia retrotransposon pCal (AAA57920), and to the integrated form of this retrotransposon, designated TCa2, and to the novel C. albicans retrotransposons 1-28, pCal was initially isolated from C. albicans hoG1042 and has a copy number of 50-100 copies per cell. It comprises identical 280 bp long terminal repeats (LTRs) and two open reading frames (ORFs). The first ORF encodes a gag (group antigen) protein, and the second ORF encodes a polyprotein (pol) consisting of an aspartate protease, integrase, reverse transcriptase (RT) and RMaseH. The gag and pol ORFs of pCal are in the same reading frame, separated only by
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel retrotransposon expression vectors useful for antigen, epitope or therapeutic agent, or detecting presence of Candida in a sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         30-OCT-1998;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to novel retrotransposons from the yeast Candida CC albicans which have a copy number of 40-150, preferably 50-100 copies CC per genome. In particular, the invention relates to the novel C. CC albicans Tyl/copia retrotransposon pCal (AAA57920), and to the integrated CC form of this retrotransposon, designated TCa2, and to the novel C. CC albicans retrotransposons 1-28. pCal was initially isolated from C. CC albicans hOG1042 and has a copy number of 50-100 copies.per cell. It CC comprises identical 280 bp long terminal repeats (LTRs) and two open CC reading frames (ORFS). The first ORF encodes a gag (group antigen) CC protein, and the second ORF encodes a polyprotein (pol) consisting of an CC aspartate protease, integrase, reverse transcriptase (RT) and RNaseH. The CC gag and pol ORFs of pCal are in the same reading frame, separated only by CC a termination codon (TGA). Translation of the pol ORF occurs through CC mediated by the formation of a pseudoknot within the gag-pol mRNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Retrotransposon; pCal; TCa2; Tyl; copia; long terminal repeat; LTR; gag gene; group antigen; polyprotein; pol, assparate procease; integrase; reverse transcriptase; RNaseH; pseudoknot; readthrough translation; stop codon suppression; gene delivery; gene therapy vector; genetic vaccine composition; immunogenic; transgenic animal; ds.
                                                                                                                                                                          The retrotransposons of the invention can be used as vectors for in vitro or in vivo transformation and expression. They can thus be used for the delivery and expression of a therapeutic, immunological or immunological or antigen) and may also be used for eliciting an immunological response in a host organism. They are therefore useful in genetic vaccine compositions and for gene therapy, particularly where the use of retroviral vectors is unsafe or undesirable. Additionally, the retrotransposons may be used to generate
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel retrotransposon expression vectors useful for expressing an antigen, epitope or therapeutic agent, or detecting genes or the presence of Candida in a sample -
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAA57926 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         01-NOV-1999;

Differentiating xylem was collected from the main stem
a 35-year old loblolly pine tree harvested during the
growing season. RNA isolation and library preparation
followed the methods of Allona et al., PNAS 95:9693-8,

For further information please see http://www.fruitfly.org The BDCP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPCI-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDCP from the isogenic strain y2; cn bw sp, the same strain used for the BDGP's pland EST libraries. A more detailed description of the library
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Determination of this BAC-end sequence was carried out as part of a collaboration with the Berkeley Drosophila Genome Project (BDGP). The BDGP is constructing a physical map of the Drosophila

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      /Clone_lib="Entamoeba histolytica Sheared DNA"
/note="Vector: pHOS1; Site_1: Bst I; Constructed at The
Institute for Genomic Research (TIGR), Rockville, MD.
Genomic DNA isolated from broth cultures of E. histolytica
using a method described by Clark and Diamond (Clark,
C.G., and Diamond, L.S. (1993) Entamoeba histolytica: a
method for isolate identification. Exp. Parasitol.
77:450.). The DNA was mechanically sheared to give a
tight size distribution (~2 kb). The v + i method used for
the library construction is described in detail in Smith,
H.O. and Venter, J.C. (Making small insert libraries for
whole genome shotun sequencing projects In Genome
Sequencing: A Practical Approach, eds. M. Vaudin and B.
Barell, Oxford University Press, 1999)."

The BDGP is constructing a physical map of the Drosophila melanogaster genome using these BACs. For further information please see http://www.fruitfly.org The BDGP Drosophila melanogaster BAC library was prepared by Kazutoyo Osoegawa and Aaron Mammoser in Pieter de Jong's laboratory in the Department of Cancer Genetics at the Roswell Park Cancer Institute in Buffalo, NY. The library is named RPG1-98 and was constructed by partial EcoRI digestion of Drosophila DNA provided by the BDGP from the isogenic strain y2; cn bw sp, the same strain used for the library and how to order individual BAC clones, the entire library, or filters for hybridization from the BACPAC Resource Center can be found at http://baccac.med.buffalo.edu/drosophila bac.htm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    gaagctaatccactaccagatgaaaataatgatgtt 4174
